

Experiment 4: Develop a Car Booking Reservation Application as SaaS

Aim

To develop a cloud-based Car Booking Reservation application using Zoho Creator.

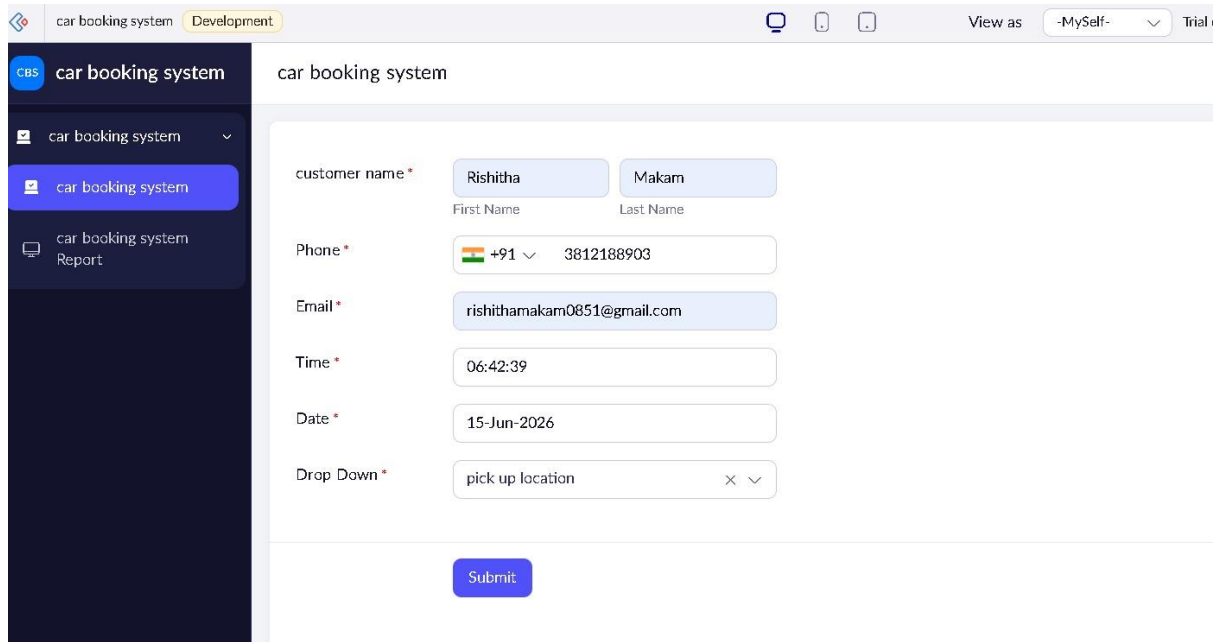

Software Used

- Zoho Creator
- Deluge Workflow
- Web Browser

Algorithm

1. Create Customer Registration form.
2. Create Car Details form.
3. Create Car Search form.
4. Create Booking form.
5. Create Payment form.
6. Check vehicle availability.
7. Confirm booking and update status.
8. Generate booking reports.

Output:

The screenshot displays the Zoho Creator interface for a 'car booking system' application. The top navigation bar shows the application name and a 'Development' status. The left sidebar contains a menu with 'car booking system' and 'car booking system Report'. The main form area is titled 'car booking system' and contains the following fields:

- customer name ***: Split into 'First Name' (Rishitha) and 'Last Name' (Makam).
- Phone ***: Includes a country code dropdown (+91) and a phone number field (3812188903).
- Email ***: rishithamakam0851@gmail.com
- Time ***: 06:42:39
- Date ***: 15-Jun-2026
- Drop Down ***: pick up location (with a clear button and dropdown arrow).

A blue 'Submit' button is located at the bottom of the form.
